

Categories of ALSC Lumber Reports

Survey – ALS inspection triggered from the implementation of Survey Methodology

Mill - Triggered from an issue identified on a survey requiring additional information to further investigation

Visit – an inspection for any other reason other than a recall, survey, or mill. Most “visits” occur when we are at a mill site for another program such as a treated survey, and the treating plant has dunnage marks under the WPM program, or we are at a WPM producer doing a WPM survey, and the facility also has HT marks in the lumber program so we will do a “visit” inspection on the HT only production.

Destination Check – Inspection of material away from the producing site that may occur at a distributor, wholesaler, and the like.
